Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models
Maximum Marks	

Idea Prioritization:

Brainstorming provides a creative and collaborative environment where team members can share ideas, identify user needs, and develop innovative solutions to real-world problems. For the FitBuddy project, brainstorming helps the team explore different ways of using Artificial Intelligence and Gemini models to create personalized and practical fitness plans.

The team focuses on generating multiple ideas before selecting the most suitable solution. Ideas related to user profiles, fitness goals, personalized workout planning, activity tracking, AI-based recommendations, progress monitoring, and user-friendly interaction are discussed and evaluated.

FitBuddy aims to simplify fitness planning by allowing users to provide their basic preferences and fitness goals, after which the AI generates a structured and personalized fitness plan. The system is designed to provide general wellness guidance while encouraging users to make safe and informed choices.

Step-1: Team Gathering, Collaboration and Select the Problem Statement:

FitBuddy – AI Fitness Plan Generator

Use this template to brainstorm the ultimate personalized fitness platform using Gemini Models. Unlock the power of AI to create seamless, data-driven workout and meal plans.

🕒 15 minutes to prepare

🕒 1.5 hours to collaborate

👥 3-10 people recommended (Developers, Fitness Coaches, Data Scientists)

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

Identify data sources

Define what fitness, nutrition, and biometric data to feed into Gemini.

Establish technical requirements

Outline integration with Gemini and API endpoints.

Map out key workflows

Determine how a user inputs goals and receives a plan.

[Review the latest Gemini API documentation →](#)

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

🕒 5 minutes

PROBLEM

How might we create an AI-powered fitness plan generator (FitBuddy) using Gemini models that delivers personalized, engaging, and sustainable wellness roadmaps for every user?

Key rules of brainstorming

Focus on multimodal inputs.

Think of edge cases.

Leverage real-time data.

Think of edge cases.

Prioritize user-centric designs.

Include a human coach loop.

Make it interactive and smart.

Step-2 : Idea listing and Grouping:

2 Brainstorm

We came up with different ideas that can help solve the problem of creating personalized and easy-to-follow fitness plans using AI and Gemini models.

🕒 10 minutes

Think freely!
There are no wrong ideas
at this stage. The more ideas,
the better!

Brainstormed Ideas

1. AI-Powered Fitness Plan Generation

- Personalized plans using Gemini models
- Based on goals & preferences

2. User Profile & Goal Analysis

- Age, experience, goals
- Available time
- User preferences

3. Personalized Workout Recommendations

- Suitable exercises
- Duration, sets, repetitions
- Rest periods

4. AI Fitness Assistant

- Answer fitness questions
- Gemini provides guidance
- Motivation & tips

5. Progress Tracking

- Record completed workouts
- Show progress over time
- Achievements

6. Workout Schedule

- Weekly plan
- Organize by available time
- Different workout types

7. Exercise Information

- Step-by-step instructions
- Proper form guidance
- Safety reminders

8. Plan Modification

- Update goals/preferences
- Generate new plan
- Track changes

Idea Grouping

Group 1 – User Profile

- Personal information
- Fitness experience
- Fitness goals
- Available workout time
- User preferences

Group 2 – AI Fitness Planning

- Personalized workout generation
- Gemini-powered recommendations
- Weekly workout plans
- Exercise selection
- Workout duration and structure

Group 3 – AI Assistance

- Fitness-related questions
- Exercise explanations
- General wellness guidance
- Plan improvement suggestions

Group 4 – Progress & Tracking

- Workout completion tracking
- Progress records
- Weekly activity tracking
- Plan updates

Group 5 – User Experience

- Simple interface
- Easy plan generation
- Clear workout instructions
- Mobile-friendly design

Final Idea Groups

Step-3: Idea Prioritization:

3 Prioritization

The brainstormed ideas are evaluated based on importance, feasibility, user value and implementation complexity. The team prioritizes the features that directly solve the problem and can realistically be implemented using Gemini models.

🕒 20 minutes

Priority Evaluation

Idea	Importance	Feasibility	User Value	Priority
AI-Powered Personalized Fitness Plan	High	High	High	High
User Profile & Goal Analysis	High	High	High	High
Weekly Workout Schedule	High	High	High	High
Personalized Exercise Recommendations	High	High	High	High
AI Fitness Assistant	High	Medium	High	High
Progress Tracking	Medium	High	Medium	Medium
Plan Modification	Medium	High	Medium	Medium
Exercise Information	Medium	High	Medium	Medium
Advanced Analytics	Medium	Medium	Medium	Medium

☆ High-Priority Ideas

- 1 AI-Powered Fitness Plan Generator**
Gemini models analyze user inputs and generate a structured fitness plan.
- 2 User Profile & Goal Analysis**
Collect user preferences and goals to make the plan more personalized.
- 3 Personalized Workout Recommendations**
Suggest suitable exercises and workout structures based on goals and preferences.
- 4 Weekly Workout Schedule**
Organize the recommendations into a simple and easy-to-follow weekly plan.

— Medium-Priority Ideas

- Progress tracking
- AI fitness assistant
- Plan modification
- Exercise information
- Activity history

💡 Selected Concept

FitBuddy – AI Fitness Plan Generator using Gemini Models

FitBuddy will use Gemini models to understand user-provided fitness goals and preferences and generate a personalized, structured fitness plan. The system will focus on making fitness planning simple, accessible and easy to follow, while providing general wellness guidance and appropriate safety reminders.

Prioritization Focus

- **Importance** – How useful the feature is to the user.
- **Feasibility** – How realistically it can be implemented.
- **User Value** – How directly it solves the problem.
