

Project Demonstration

Application Demonstration & Workflow

Date	
Team ID	6aba07eeb2817f097462be97
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models
Minimum Marks	

Feature Demonstrationature :

The completed FitBuddy application is demonstrated by presenting its major features and overall workflow. The demonstration shows how users create their profile, enter fitness goals and preferences, and receive personalized plans using Gemini AI. It also explains how workout recommendations, progress tracking, and plan updates work within the application. The team demonstrates the application with sample user inputs to show how the AI responds to different requirements. The interface, navigation, and interaction between different modules are also explained. Finally, the demonstration highlights how FitBuddy provides a simple and personalized fitness experience for users.

FitBuddy's feature demonstration highlights an intelligent, end-to-end fitness ecosystem designed to keep users engaged and accountable by seamlessly blending personalized planning with active tracking and AI-driven guidance. The demonstration kicks off with the smart workout generator, which instantly builds a customized routine based on user goals, followed by the live set and rep tracker that helps users log weights and manage rest intervals right on the gym floor without breaking focus. Next, the interactive AI fitness companion steps in to answer real-time questions about form, nutrition, and exercise modifications, while the comprehensive progress analytics dashboard wraps everything up with visual trend lines, volume charts, and milestone badges to track long-term transformation.

User Workflow:

Demonstrating Our Completed Project and Explaining How It Works

The project demonstration shows the fully developed FitBuddy application and explains how it works in a simple and clear way. The team presents the main features, such as user registration, AI-powered workout and diet plans, progress tracking and personalized recommendations. During the demo, we walk through the application step by step, showing real-time responses and how each feature helps users achieve their fitness goals.
