| Project Name  | FitBuddy – AI Fitness Plan Generator using Gemini Models |
| Minimum Marks |                                                          |

### **Solution Architecture:**

FitBuddy's solution architecture connects the user, web application, Gemini AI, and database to generate personalized fitness plans. Its main goals are to:

- Collect user details such as fitness goals, fitness level, preferences, and available time.
- Process the user information through Gemini models to generate personalized workout plans and recommendations.
- Connect the frontend, backend, AI service, and database to provide a smooth and reliable fitness experience.
- Store user profiles, generated plans, workout history, and progress data securely for future use.
- Provide a simple and responsive interface through which users can view, follow, and update their fitness plans.
